13	2.59	0.045
12	2.65	0.035

There's new technology stacked inside and out in the state-of-the-art Summit. Starting with the cover, TX-23 Hybrid is a modernized variation of the beloved TX-16™ that's soared the Phaze™ II to record heights. Equipped with all the midlane read you can handle, this improved formula gives enhanced oil absorption for even better grip on those slick conditions. We've taken the Centripetal HD weight block and paired it with our new A.I. (Amplified Inertia) outer core. This drives the RG down and differential up, everything you need to ensure this ball spins up fast and a lot. Officially, this is Storm's strongest symmetric ball to date. Once you get one in your hands it'll be tough to get it out.
