12, 13 lb.

The Hy-Road™ has been the optimal premium performance choice for most bowlers for 15 years, and the most revered ball in Storm history. Its carry at the pins has been matchless – until now. Improved performance starts on the inside with the merging of a decorated legend and a rising superstar. The Inverted Fe² A.I. Core was designed to outperform and help you execute every shot. The Hy-Road complements vast numbers of styles and countless oil patterns as one of the best benchmark balls of all time. Today, benchmark reliability meets amplified inertia with the biggest revolutionary advance to outer core technology in 30 years of Storm history. This medium-high RG and differential infusion will provide a smooth and predictable shape at the end of the lane better than any ball that's come before it. A.I. Core technology is now offered across all weights so the benefit of "Amplified Inertia" can be experienced no matter what weight you use.
