BEHIND THE DESIGN:

Sometimes evolution can spark new life into technology from yesteryear. Such is the case with our latest introduction to the HP4 Line of balls. With recent more in-depth studies of flare migration and core tendencies we circled the wagons back to the Paragon™ Core which was created based on axis planes in order to keep the core in constant motion longer.

Upon further review and testing we found that by altering the composite of this core, we were able to create the fastest revving, strongest continuation and lowest RG asymmetrical core ever offered from Roto Grip now known as the PARAGON™ LRG CORE.

From there, we wrapped the Paragon LRG Core with our most aggressive coverstock material known as MicroTrax™ Solid Reactive making this the optimum ball choice for anyone and everyone on those heavier oil conditions.
