Imagine the control of the !Q Tour, but with a hybrid twist. Now, amplify that with cutting-edge A.I. Core technology, and top it off with a groundbreaking polishing compound that guarantees both eye-catching shelf appeal and impressive on-lane performance. This is where the C³ legacy collides with A.I. innovation—creating one of the most exciting bowling ball releases of the year. The C³ weight block, already a contender with its low RG and medium differential combo, is further refined in the !Q Tour A.I. thanks to the addition of an advanced A.I. outer core. This enhancement elevates ball dynamics and pin carry to new levels. The R2S Hybrid coverstock, renowned for making the !Q Tour Fusion such a fan favorite, gets a fresh spin in this modern form. And with an all-new polishing compound designed to elevate surface performance, we've answered your call for greater control and surface longevity. Power Edge offers the perfect solution for maintaining and maximizing your ball's surface, ensuring peak performance with every roll.
