UNDRILLED

CORE:

Rondure™ Core – This mildly asymmetric core shape was constructed to bridge the gap between symmetrical cores and super strong asymmetrical cores. Thus, creating more overall motion and change of direction than a traditional symmetrical core, but not as early and forward as a strong asymmetrical core.

COVERSTOCK:

Tour-ethane™ Pearl – Upon further review, we found this specific formula of true urethane material provided the best overall control and reaction on high friction oil patterns and higher friction lane surfaces.

Factory Finish: 1000-grit Abralon

ENGINEERED FOR:

Light Oil - Light/Medium Oil Conditions

Available Weights: 16lbs – 12lbs
